

Project by Best-team

Progress report 1

Team members:

Medeubekov Sergazy, Askhat Al-Aziz, Kadyrbekov Aslan

What have we done:

We formed a team of 3 people and started thinking about the project. So far, we have several options for the project and we have not yet decided which one to choose.

We decided to make the basic structure of the site first: registration and login, and only then decide on the niche and the name of the application. We have distributed the tasks:

Askhat Al-Aziz: made the project structure and created a mod file, added a MySQL database and linked it to all functions.

Medeubekov Sergazy: made basic html pages: home, login and registration; created a registration function.

Kadyrbekov Aslan: created a login function where users can access the site after registration.

What we want to do:

Determine the niche of the project and further understand in which direction to move.

Finalize all the shortcomings, finish continue to make pages on the frontend, add search.
